1. The system of radar defenses is being extended along the German and Austrian borders in southern Bohemia and Moravia. Work is being carried out rapidly and the radar system is to be completed as far as Bratislava by the end of 1954.
2. The radar apparatuses are located inside the restricted border area at a distance of 500 to 1,000 meters from the border and at intervals of two to five kilometers from each other. These are fixed radar installations. Communications between the radar stations are by means either of direct telephone lines or of radio-telephone stations. Often both means of communication exist.
3. The Air Force also has its own radar apparatuses, which are mobile. The larger Air Force radar units have three installations apiece. Communication with the fixed radar installations along the border is usually maintained by radio-telephone.
